Document version: 1.0

Document language: en-US

Security level: sensitive

Product name: ICW Professional Exchange Server

Product release: Release 3.2

Last change: February 2011

# 1 Release Notes

Product name: Professional Exchange Server

Version: 3.2.0 General Availability

Release date 02/23/2011

## 1.1 Changes in this Version

All changes in Professional Exchange Server are described in the Product Specification document which is part of the release package.

## 1.2 Known Limitations

### 1.2.1 ICW Professional Exchange Server

- The applications GE Healthcare Centricity Enterprise Web 4.0 and Professional Exchange Server can currently be used together only with MS Internet Explorer 7 or 8.
- Documents, which in the medical record are opened by a document icon and that are not displayed in the browser are not automatically closed when changing to another patient's document. These documents as well as the display application have to be closed manually.

## 1.3 List of Open Bugs and their Workarounds

| Jira ID | Description  | Workaround                                     |
|---------|--|--|
| VMR-227 | Login after session timeout in terminology tools leads to error page                                       | Navigate directly to the login page and login. |
| VMR-487 | User requestor is true on an expired session log entry   |  |
| VMR-500 | Value of User ID and Username interchanged on ATNA audit event for an extend document metadata view        |  |
| VMR-838 | Highlighting of selected folder for document class is lost after collapsing and reopening the filter panel |  |

| Jira ID  | Description   | Workaround  |
|----------|---|---|
| VMR-1140 | Error when clicking cancel on an open TIF file dialog (IE6 only)  | This is a browser specific bug and in the worst case only creates a stack trace without any impact on the user. |
| VMR-1240 | Stack trace error in log file when sending an unsubscribe message for a subscription which does not exist                             |   |
| VMR-1260 | OMI adapter does not respond with the expected error message (unknown patient ID error) when patient id and KOS doc UID are not found |   |
| VMR-1264 | An inactive user is not displayed in the administration UI user list  | Perform an extended search and activating the "deactivated" checkbox, the user is listed.                       |
| VMR-1302 | Subscription email notification option is not available for LDAP users  |   |
| VMR-1316 | Migration is not possible when using Schema Prefix  |   |
| VMR-1322 | Calendar popup only available in one language   |   |

## 1.4 Solved Bugs

| Jira ID | Description   |
|---------|---|
| VMR-492 | ATNA log entry for create user via User Admin is wrong                                |
| VMR-495 | Wrong ATNA Audit event for "Add permission role" to user                              |
| VMR-542 | Two validation errors are summarised in one incomplete error message                  |
| VMR-583 | Admin UI layout is corrupt when resizing window                                       |
| VMR-666 | jsfViewHandler Warning is thrown after a new app start and log-in                     |
| VMR-726 | 3-term (or more) searches cause full table scans in T_PATIENT                         |
| VMR-748 | The session logout timer is not reset when clicking on the notification table headers |
| VMR-668 | Unresolved placeholders in "change password" tooltip that are shown after user error  |
| VMR-862 | Patient banner view: ID/SSN shortening is inconsistent                                |

| Jira ID  | Description  |
|----------|--|
| VMR-871  | Notifications page: calendar is not correctly displayed                        |
| VMR-872  | Patient telecom data in banner is missing                                      |
| VMR-883  | Refresh button does not refresh documents folder value                         |
| VMR-938  | Patient can be deleted using HL7patient merge message (A40)                    |
| VMR-947  | Security override attempt with wrong password does not throw any error message |
| VMR-951  | Some JS/Ajax events do not perform a session time-out reset                    |
| VMR-970  | Pop up text is missing when searching for a non-existent user                  |
| VMR-997  | User cannot log in after the change password screen disappears                 |
| VMR-1047 | Welcome page for a user without any roles is empty                             |
| VMR-1069 | Create Subscription pop-up window has a non-visible close button               |
| VMR-1081 | Welcome page DE version: calendar is not translated                            |
| VMR-1238 | Cross-Site Scripting Vulnerability on document title                           |
| VMR-1296 | Slow birth date search   |
| VMR-1306 | Date of birth shifted off by one in ADT messages                               |

## 1.5 Compatibility Constraints

### 1.5.1 Application server

- Sun Java SE Development Kit 6 (64bit), update 20 or higher
- Red Hat Enterprise Linux (RHEL) 5.4, 64 Bit for x86
- SUSE Linux Enterprise Server (SLES) 11, 64 Bit for x86

### 1.5.2 Database server

- Oracle 10.2.0.4 or Oracle 11.1.0.6
- Red Hat Enterprise Linux (RHEL) 5.4, 64 Bit for x86

## 1.6 Resources

The release can be obtained as a CD containing:

binary software archives, full end user documentation, installation manual and installation scripts.
